

Setting row cleaners is a pain. CleanSweep™ lets you do it from your cab.

Row cleaners that are set too high or light leave residue in the row. That makes it hard for seeds planted on or near the debris to get moisture and emerge, which cuts yield and costs you money.

Row cleaners that are set too low or heavy can move soil as well as residue, which can cause trenching and even move soil-applied herbicide. That makes it hard to hit the right depth and control weeds, which also robs you of yield and profit.

But setting row cleaners is tedious and time-consuming.

Now, with CleanSweep from Precision Planting, you can increase or decrease force on your row cleaners from the cab, on the go. That makes proper seedbed preparation easy, which makes it easy to make every seed count. You can even lift the row cleaners off the ground.

Watch your row cleaners and set the cab-mounted controller to where they sweep away the residue and leave a perfect path for planting. CleanSweep's pneumatic cylinder does the work.

CleanSweep includes the air cylinder, lines, air tank and compressor, and controller. 2010 models are available for these row cleaners:

- Martin C125 MTS, MTS-XP and MTS-IH
- Martin C125 MTR, MTR-XP and MTR-IH
- Martin 1360 BDC and BD
- Yetter Titan 2967-035 and 2967-007

Need more aggressive cleaning? These larger, 3 1/2" treader wheels let you increase down pressure on your row cleaners to remove tough, thick residue without trenching or moving excessive amounts of soil.

Take the pain out of row cleaner settings. See your Precision Planting dealer, call 309-925-5050 or email info@precisionplanting.com. While you're at it, ask for the **FREE NEW DVD** from Precision Planting.

YIELD IS IN THE DETAILS.
